Professional Summary

Full-Stack Software Engineer (Rutgers CS, May 2026) with production experience at a university platform team and a California B2B SaaS startup. Built and launched an operations platform from scratch that now runs department-wide, serving 1,500 K-12 students and 60 tutors. At ChannelSeal, shipped multi-tenant governance features across auth, API, and UI layers in a weekly release cadence. Strong across TypeScript, React, NestJS, and PostgreSQL, with a focus on auth systems and clean API design.

Technical Skills

Languages: TypeScript, JavaScript, Python, Java, C, SQL

Frameworks/Tools: React, Next.js, Node.js, Express, NestJS, Docker, Jest, Playwright

Data: PostgreSQL, MySQL, MongoDB, Firebase/Firestore

Experience

Rutgers Accelerate and Renew Academy – Camden, NJ

Mar 2025 – May 2026

Lead Full-Stack Developer (On-Campus)

- Launched a tutoring operations platform now live department-wide for 1,500 K-12 students and 60 tutors by designing and building it solo from scratch (Next.js, NestJS, PostgreSQL), covering scheduling, auth, dashboards, and KPI reporting; under consideration for licensing to partner schools.
- Eliminated infrastructure costs entirely (cut to \$0) and removed all third-party data exposure by re-engineering hosting on Google Apps Script within the university's Workspace environment.
- Prevented any cross-tutor data access by enforcing isolation at the middleware layer, guaranteeing each tutor could view only their own assigned students' rosters and records.

ChannelSeal – Remote (California, USA)

Sep 2025 – Dec 2025

Software Engineer Intern

- Delivered 15 production endpoints and UI workflows end-to-end (React, NestJS, PostgreSQL) in a weekly release cadence for a multi-tenant governance portal, owning UI, API, and DB layers with no handoffs.
- Prevented cross-tenant data leakage across every read and write path by implementing Auth0 JWT/JWKS validation with custom NestJS guards and interceptors at the request layer.
- Eliminated duplicated frontend table logic that had spread across the codebase by designing a server-driven data table (pagination, sort, filter) and standardizing the paginated API contract.
- Reduced regressions reaching production by wiring Docker Compose, TypeORM migrations, and automated Jest/Playwright test suites into CI.

SoftScribble Pvt Ltd – India

May 2022 – Dec 2022

Software Development Intern

- Shipped bulk messaging, chatbot workflows, and real-time support features for a SaaS WhatsApp platform by designing REST APIs and schemas for high-throughput messaging with retries and media attachments.
- Replaced manual spreadsheet tracking for ops teams by building React ERP modules for task tracking, document sharing, and financial reporting.
- Cut failed message sends by 38% and kept the platform's numbers clear of WhatsApp's bot detection by designing a rate-limiting and queuing system for outbound message traffic.

Projects

Sparsh: Cross-Platform Clipboard & File Sharing ([GitHub](#))

Electron, Next.js/Nextron, Express, Socket.IO, Firebase/Firestore, Google Drive API, OAuth2

- Enabled real-time clipboard and file sync across devices by building a desktop app on Socket.IO and Firebase, with Drive-backed 3-slot LRU storage and OAuth2 authentication.
- Delivered a native-feeling cross-platform experience by implementing OS notifications, background clipboard listeners, global shortcuts (Cmd/Ctrl+U/D/T), and Electron main/renderer IPC; packaged via electron-builder.

Multithreaded Wikipedia Crawler ([GitHub](#))

C, pthreads, libcurl, gumbo-parser

- Built a BFS-based Wikipedia path-finder in C that finds the shortest link path between any two articles using 4 concurrent worker threads (pthreads), libcurl for HTTP fetching, and gumbo-parser for HTML link extraction.
- Implemented from scratch: a thread-safe BFS queue, custom hash table for visited-URL deduplication, priority-scored URL ordering, disk-based HTML cache, and full path reconstruction across 9 modular source files.

Education

Rutgers University, Camden, NJ

Aug 2024 – May 2026

Bachelor of Science, Computer Science

GPA: 3.7

Vidyalankar School of Information Technology, Mumbai, India

Jun 2022 – May 2024

Bachelor of Science, Information Technology (Transferred to Rutgers)

GPA: 4.0
